

Used Parts for Forklifts

Used Forklift Parts - Without doubt, forklift components will eventually wear out and require replacing. The alternative of purchasing new components can become costly so one more idea is to buy used parts. This can save much money in the end. It is a great idea to buy used forklift components that have been reproduced. These components will guarantee that you are getting components which will work for a long time and be productive.

Broken or worn parts that are reproduced are a very cost effective solution as opposed to rebuilding. With rebuilding components, only the parts which are broken or worn out get changed, which means that other wearable components might break down soon after acquisition.

Remanufacturing however offers the best assurance for second-hand components. Reproduced components are taken apart and cleaned and then all wearable pieces are changed. All wearable parts are replaced regardless of age or wear which is one more reason why remanufactured components in general function so much better. Any component within the part is new and this provides much longer life to the used part. Depending on the lift truck components that are being redone, the cleaning process and the whole remanufacturing process will vary.

The engines are cleaned after a complete disassembly. Various engine components like spark plugs, pistons, rings, filters, valves, and valve springs can be replaced during the process of remanufacturing. The engines are hot tested after reassembly to ensure that there are no noise, no oil pressure problems, no leaks or any vacuum.

Transmissions are pressure washed, disassembled and oven cleaned. A thorough examination is done in order to check for any cracks. Seals, bearings and bushings are all replaced. Usually, the replacement parts used on transmission parts meet OEM specifications.

A few forklift parts like for example the water pump, torque converters, the alternator, steer axles and the starter can be quite serviceable after worn parts are replaced. The electronic control in the electric lift truck is maintained by the control card. This card could also be remanufactured with replacing all aged and worn out parts. Not like several lift truck parts the control card can only have the worn and aged components replaced.

Parts which are remanufactured have to be thoroughly checked upon reassembly to ensure they are in good condition previous to being sold. When acquiring these components, it is a good idea to be sure that they have undergone all of the proper testing and inspections. On certain bigger parts like for instance transmissions, steer axles and engines, OEM specification replacement parts should be utilized.

The forklift dealer can guarantee that the parts they have reproduced meet the OEM specifications. This will likewise ensure the parts meet industry standards. A lot of details go into remanufacturing second-hand components. This attention to detail offers more serviceability out of reproduced components compared to the parts that were only rebuilt.
