

Carriage Rollers

Carriage Roller - Carriage rollers are especially designed bearings which are utilized on lift masts so as to help them operate in challenging environmental surroundings. Lift masts are often subjected to shocks, oscillations, high dynamic and vibrations and static loads. This equipment is often exposed to environmental influences like for instance dust, cold, heat, contamination, aggressive ambient air and moisture. Therefore, the guidance arrangements of lift masts should be particularly tough and have a certain high load carrying capacity.

To help compete in lots of various environmental surroundings, carriage rollers were designed for various lift masts. While having the ability to deal with a particularly high load carrying capacity, these bearings provided an economical operational security for the lift masts' guidance arrangements.
